Education

- | | |
|---------------------|---|
| Feb 2021 – Jan 2023 | National Taiwan University of Science and Technology (NTUST) – R.O.C.
Thesis: Virtual testing systems with trajectory-guided control learned by others
<i>MSc in Electronic and Computer Engineering</i> |
| Jun 2016 – Aug 2020 | Universitas Indonesia (UI) – Indonesia
Thesis: Development of Medical Image Encryption System Using Byte-Level Base-64 Encoding and AES Encryption Method
<i>BE in Computer Engineering</i> |

Work Experiences

- | | |
|---------------------|--|
| Jun 2024 – Now | Groundhog Technologies, Inc. – R.O.C.
<i>Senior Software Engineer</i> <ul style="list-style-type: none">• Architected an agentic system using Google ADK with fuzzy-matching tool selection algorithms, optimizing tool accuracy and decreasing agent invocation time by 50%.• Built a Text-to-SQL agent and integrated Retrieval-Augmented Generation (RAG) via a custom Model Control Protocol (MCP) to standardize backend model communication.• Deployed lightweight, privacy-preserving local language models using a Llama.cpp server distributed across Mac Studio and NVIDIA DGX hardware infrastructures.• Automated data-driven analysis for telecom site planning and led the system-level integration of modular Open RAN (O-RAN) network applications. |
| Apr 2023 – Jun 2024 | Groundhog Technologies, Inc. – R.O.C.
<i>Software Engineer</i> <ul style="list-style-type: none">• Developed a scalable Flask automation framework to manage data workflows, integrating WordPress and Redmine to streamline task distribution.• Engineered large-scale data aggregation architectures using advanced ClickHouse queries, delivering low-latency structured analytics for Tableau and Grafana dashboards. |
| Jan 2022 – Jan 2023 | NTUST and DRC – R.O.C.
<i>Autonomous Systems Research Assistant (UR Project)</i> <ul style="list-style-type: none">• Developed a CARLA simulation testing system covering data gathering to performance assessment, utilizing Open Scenarios and highly detailed 3D maps.• Innovated an autonomous vehicle model integrating a control framework from ROACH, combined with a multi-sensor system to elevate industry safety mapping capabilities. |
| Feb 2021 – Jan 2022 | NTUST and ITRI – R.O.C.
<i>Computer Vision Research Assistant</i> <ul style="list-style-type: none">• Optimized PyTorch training workflows by implementing complex data augmentation pipelines and deep domain adaptation on LAV models, significantly increasing detection accuracy.• Evaluated and replicated state-of-the-art ML architectures from Detectron-based papers to establish standardized internal baselines. |

Feb 2019 – Aug 2019	NTUST – R.O.C. <i>Software Engineering Intern</i> • Developed WebSocket solutions for real-time UI-server communication, elevating user engagement and reducing system latency. • Designed a smart user access scheduler utilizing advanced scheduling algorithms to continuously optimize server resources. • Built and deployed robust microservices on Docker using C#, ensuring high back-end reliability and peak system performance. https://hackmd.io/@witolmalik/ByPQ1YFeB
---------------------	--

Technical Skills

AI & ML	Google ADK, PyTorch, Detectron, Ollama, Llama.cpp, LangGraph, RAG, ReAct Agents, MCP, Model Benchmarking
Programming	Python, C++ , Java, C#, JavaScript/TypeScript, PHP, Bash/Shell
Backend & Web	Flask, FastAPI, Express.js, Next.js, Angular
Data Engineering	ClickHouse, PostgreSQL, MySQL, MongoDB, Kafka, Schema Registry
DevOps & Cloud	Docker, Kubernetes, Linux, Git, CI/CD, Helm
Simulation	CARLA, ScenarioRunner, Leaderboard, Multi-Sensor Systems

Awards

- NTUST Scholarship Awardee for MSc (2021-2023)
- Finalist of Indonesian Student Business Competition (2019)
- 3rd Winner of National Annual Informatics Competition: Anforcom (2015)

Languages

- **Bahasa** Native Speaker
- **English** Full Professional Proficiency
- **Chinese** Capable of Basic
